Push/Pull Hand Control

Keeping you actively involved
in YOUR WORLD

expand your world...

Push/Pull Hand Control

3700 (69709-000)

A Tri-Pin Grip that is convenient, comfortable and fully adjustable is used to activate the push/pull movement of this control to engage the accelerator and brake. This grip may also be custom fitted to operate the turn signals, horn or dimmer. The control can be mounted for either left or right hand operation in most full size and lowered floor minivans. Consult your local authorized dealer about applicable vehicles and custom fitting.

Our controls are built to be reliable, providing you with years of dependable performance. We back their strength with a full two-year warranty that gives you peace of mind as well as freedom.

Mobility Products & Design gives you the freedom to set your own agenda, get behind the wheel and go where you want to go—whether you are running errands across town or visiting family and friends across the country.

For over 25 years, we've been designing and refining customized, ergonomic driving controls that keep you actively involved in your world.

- Our easy-to-use hand controls make driving simple—just push forward to brake and pull to accelerate.
- Finished surfaces and sleek lines complement your vehicle's interior.
- Adaptable to most trucks and vans.
- Flexible enough to allow an ambulatory person to operate the vehicle with ease.

Freedom... it's an essential part of life!

Many states either require or recommend that anyone using our products have a driver evaluation prior to installation. We recommend all customers have a driver evaluation performed by a qualified evaluator. If you should need assistance, contact www.driver-ed.org or Mobility Products & Design at toll free 1.800.488.7688.
