AMKAR MOBILITY CONVERSION

by

AMKAR's wheelchair accessible ramp is designed so that it can be opened or closed with the push of a button. This allows for safe and easy entry or exit of the vehicle for a wheelchair occupant. Inside AMKAR, the occupant can either drive or remain in their wheelchair while being driven. Either way, the wheelchair is easily locked into place with the simple push of a button and the occupant secured with AMKAR's safety belt system. A driver can use the standard gas and brake foot pedals or a physically challenged driver can operate AMKAR with an optional Mobility Products Design Push/Pull 3400 Series Hand Control.
