

“Classic” hand control

Knob Grip Offset Handle

“Classic” 3500KX (68732-000)

This control has everything the 3500K offers plus additional features and is recommended by driver evaluators. The offset handle is fully adjustable 360° to provide additional knee clearance, more leverage, or to locate the handle closer to the turn signal. This handle can also be used to adjust the angle or pitch of grips equipped with wrist supports. Your local authorized dealer can easily install these items.

Foam Grip Offset Handle

“Classic” 3500F (68549-000)

Recommended by driver evaluators, our foam grip was designed two inches longer in length than most hand controls, ensuring comfortable driving control and greater leverage when braking and accelerating. Your local authorized dealer can easily install this.

Knob Grip Straight Handle

“Classic” 3500K (68513-000)

This hand control has a knob grip that fits comfortably in the palm of the driver’s hand. The knob grip and bent brake rod are standard on this unit. The bent brake rod allows mounting the handle control higher in the vehicle to provide more driver convenience and comfort. The exclusive center pivot of our controls allows the grip to be pivoted away from the door for more hand clearance and is recommended by driver evaluators. This control can be equipped with a foam handle or horn and dimmer switches by your local authorized dealer.

Straight Handle with Wrist Support

“Classic” 3502WHD (68578-000)

This steering control offers a foam grip handle with a soft foam wrist support and side hand guard for additional leverage, comfort and convenience for the driver. Both foam grips are soft, washable, replaceable and are not heat sensitive. Our exclusive center pivot allows the grip to be pivoted away from the door for more hand clearance.

An optional offset handle may be incorporated with the wrist support grip to provide additional knee clearance, more leverage or to locate the handle closer to the turn signal. The offset handle can also be used to adjust the angle for pitch of the wrist support grip. Your local authorized dealer can easily make the adjustments.
